

Monitoring Your Loved One's Physical Health Status During the Return to Community Activities

Kylie Tray, MA- ASERT Western Region; Arvind Venkat, MD- Allegheny General Hospital;
Joann Migyanka, DEd- Indiana University of Pennsylvania

KEY TAKEAWAYS

This presentation is designed to support families and caregivers as they transition a loved one with autism back into the community following the COVID-19 pandemic. Topics include: An overview of the virus, signs and symptoms, the unique challenges of diagnosing COVID-19 in individuals with autism, steps for prevention, and getting back into the community.

- Symptoms of COVID-19 can present differently in adults than in children.
- Communication impairments can make it difficult to diagnosis COVID-19 in individual with autism.
- Even as we continue to integrate back into the community, we still need to focus on prevention.

- [Preventing and COVID-19 and Monitoring Health](#)
